## iCare EIDON Family

**TrueColor images reveal even small details** from center to periphery helping to detect signs of pathologies.

**Ultra-Widefield view up to 200°** covers larger portion of retina allowing for documentation of peripheral retinal pathologies.

Thanks to the **Confocal Technology** the images are clear and sharp despite media opacities and dilation is not needed.

**Fully automated operation** speeds up examination time and requires only minimal training.

The three models serve different needs covering **TrueColor, Infrared, Blue Autofluorescence and Fluorescein Angiography** modalities.
